This document explains MindBoard (Beta) Version 0.7.5.

Introduction

Chapter 1. About MindBoard 2 (Beta)

MindBoard 2 (Beta) is a freehand mind-mapping application with stylus for Android tablet. And this edition has text input and image import feature.

1.1. Basic Concept

Less is more.

In order to concentrate your thinking activity, this application has less user interface. And you can quickly build your map by using a few basic operations.

1.2. Requirement

- Android 4.4 Kitkat or newer.
- Digitizer STYLUS like S-Pen

This app is designed for Galaxy Note series and Galaxy Tab A with S-Pen.

If build your map with text and image only, you can use this application without stylus.

1.3. Installation

Get the [MindBoard 2 \(Beata\) App](#) on Google Play.

1.4. Getting help

If you have any questions, please [contact us](#). And also your feedback will be much appreciated.

Using MindBoard

Chapter 2. Editor

2.1. Basic Policy

- **By Stylus** : Drawing your ideas freely
- **By Finger** : Editing and operating your ideas.

2.2. Mode

MindBoard 2 (Beta) has **TWO MODE** in the editor activity. One is **MAP editor mode**, the other is **NODE editor mode**.

Use **MAP editor mode** when building your thoughts as mind-mapping, and use **NODE editor mode** when output your ideas on a branch. In order to switch these modes by double tap gesture with **finger**.

When switching from **MAP editor mode** to **NODE editor mode**, it is also enabled to doubletap gesture with **stylus**.

2.3. Map Editor Mode

This mode is for builder your thoughts as mind-mapping.
