This document explains MindBoard (Beta) Version 0.7.5.

# Introduction

# Chapter 1. About MindBoard 2 (Beta)

MindBoard 2 (Beta) is a freehand mind-mapping application with stylus for Android tablets. In addition, this edition has text input and image import feature.

## 1.1. Basic Concept

Less is more.

In order to concentrate your thinking activity, this application has less user interface. And you can quickly build your map by using a few basic operations.

# 1.2. Requirement

- Android 4.4 Kitkat or newer.
- Digitizer STYLUS like S-Pen

This app is designed for Galaxy Note series and Galaxy Tab A with S-Pen.

If build your map with text and image only, you can use this application without stylus.

## 1.3. Installation

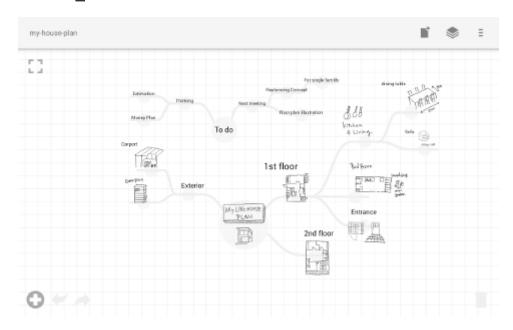

Get the MindBoard 2 (Beata) App on Google Play.

# 1.4. Getting help

If you have any questions, please contact us. And also your feedback will be much appreciated.

# **Using MindBoard**

# Chapter 2. Editor

# 2.1. Basic Policy

• By Stylus : Drawing your ideas freely

• By Finger: Editing and operating your ideas.

## 2.2. Mode

MindBoard 2 (Beta) has **two mode** in the editor activity. One is **Map Edit Mode**, the other is **Node Edit Mode**.

Use **Map Edit Mode** when building your thoughts as mind-mapping, and use **Node Edit Mode** when output your ideas on a branch. In order to switch these modes by **double tap gesture with finger**.

In order to switch from **Map Edit Mode** to **Node Edit Mode**, you can also use doubletap gesture with **stylus**.

# 2.3. Map Edit Mode

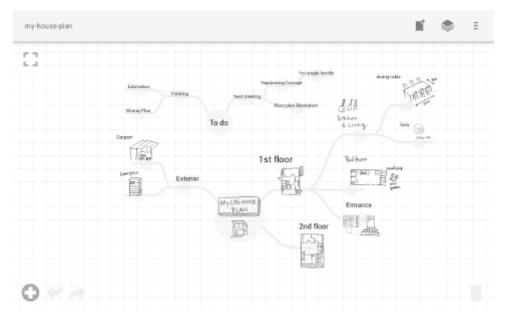

Figure 1. Editor Activity Map Edit Mode
